

This is some text that illustrates **bolded**, *italicized* and **a combination of both** formatting options.

This is in red.

Starting in red, change to black then continue in red but end in default color, whoops, try italicized green.

This is some text that has tags like `bold` and `<i>italic</i>` but tagging has been turned off so they won't be interpreted.

Then I re-enable the tags like **bold** and *italic* but I don't have to reset the tagging configuration
